he Statistical Annex is a companion to the report Health Expenditures in Canada by Age and Sex, 1980-81 to 2000-01, which was published as part of a number of studies undertaken by Health Canada on the impact of the ageing of our population on health care expenditures.

The Statistical Annex consists of two sections. The first presents a number of charts on selected data on health expenditures by age and sex. The second section contains detailed statistical tables on health expenditures by age and sex.

Tables 1 to 8 and 9 to 16 cover health expenditures by sector of finance. Tables 17 to 23 and 24 to 30 show provincial and territorial government health expenditures by category of expenditure. Tables 31 to 37 and 38 to 44 cover private sector health expenditures by category of expenditure. Tables 45 to 53 and 54 to 62 give the public and private share of health expenditures by category of expenditure.

For each of the above series of tables, the first set show data for Canada for the years 1980-81 to 2000-01 and the last set show data for the provinces and territories for the year 2000-01.

Tables 63 to 76, 77 to 90, 91 to 104 and 105 to 118 cover, respectively total, provincial and territorial government, private sector and other public sector health expenditures by province and territory.

Finally, Tables X1 and X2 present population by age and sex for Canada from 1980 to 2000 and for each province and territory for 2000.

The main report, *Health Expenditures in Canada by Age and Sex, 1980-81 to 2000-01*, is made up of four sections: trend analysis accompanied by text figures and text tables; definitions; methodology; and statistical tables.

Both report and this *Statistical Annex* are available on the Health Canada Web site or in print on request. A *Methodology Guide* is available on request only.

'Annexe statistique accompagne le rapport Dépenses de santé au Canada selon l'âge et le sexe, 1980-1981 à 2000-2001 qui a été publié avec un certain nombre d'études entreprises par Santé Canada sur les conséquences du vieillissement de notre population sur les dépenses de santé.

L'Annexe statistique comprend deux sections. La première présente un nombre de tableaux sur des données relatives aux dépenses de santé selon l'âge et le sexe. La deuxième section contient des tableaux statistiques sur les dépenses de santé selon l'âge et le sexe.

Les tableaux 1 à 8 et 9 à 16 traitent des dépenses en santé par secteur de financement. Les tableaux 17 à 23 et 24 à 30 présentent les dépenses de santé des gouvernements provinciaux et territoriaux par catégories de dépenses. Les tableaux 31 à 37 et 38 à 44 traitent des dépenses de santé dans le secteur privé par catégorie de dépenses. Les tableaux 45 à 53 et 54 à 62 présentent la part des dépenses de santé des secteurs public et privé par catégorie de dépenses.

Pour chacune des séries de tableaux susmentionnées, la première série présente des données sur le Canada pour les 1980-1981 à 2000-2001 et la dernière série comprend des données pour les provinces et les territoires pour l'année 2000-2001.

Les tableaux 63 à 76, 77 à 90, 91 à 104 et 105 à 118 présentent respectivement, par province et territoire, les dépenses de santé totales, selon le gouvernement provincial ou territorial, le secteur privé et le secteur public.

Enfin les tableaux X1 et X2 présentent la population canadienne par âge et sexe de 1980 à 2000 et pour chaque province et territoire pour 2000.

Le rapport principal, *Dépenses de santé au Canada selon l'âge et le sexe*, 1980-1981 à 2000-2001, comporte quatre sections : une analyse des tendances accompagnée de figures et de tableaux explicatifs; des définitions; une méthodologie; et des tableaux statistiques.

Le rapport et l'Annexe statistique sont disponibles sur le site Web de Santé Canada ou sur copies papier sur demande. Le Guide méthodologique est disponible sur demande seulement. The main report is the second prepared by Health Canada on health expenditures by age group, sex, category of expenditure, sector of finance and province and territory. The second report covers two decades of health expenditure.

In the main report, age groups are recorded in ten-year age groups. As well, estimates for seniors are now available for three sub-groups: 65-74, 75-84 and 85+. Seven categories of expenditure are covered: hospitals; other institutions; physicians; other professionals; drugs; home care services; and other expenditures.

For each sector of finance and category of expenditure, the Methodology Guide presents: the definition of the relevant sector of finance or category of expenditure; the source of administrative data used to distribute health expenditures by age and sex; the description and source of the proxy variables used to distribute health expenditures by age and sex when no administrative data were available; the method of extrapolation used to estimate years where data were missing; and a caveat whenever necessary.

Finally, the Technical Notes section explains concepts related to this study, such as population estimates and projections, deflators, the method used for extrapolation and the method used for long-term projections. The last section also explains how home care expenditures were estimated.

Estimates were derived from a new model of health expenditures by age and sex. This model will assist health policy analysts and researchers with the analysis of the impact of the ageing of our population on different categories of health expenditure. It will also contribute to a better understanding of cost drivers and pressures on our primarily publicly financed health care system.

Initial data used to estimate health expenditures by age and sex were extracted from the National Health Expenditure (NHEX) Database maintained by the Canadian Institute for Health Information (CIHI). However, Health Canada has presented the data on a fiscal year basis to facilitate the analysis of health expenditures from a provincial and territorial government perspective.

A separate estimate was also prepared by Health Canada for home care service expenditures provided by

Le rapport principal constitue le deuxième rapport établi par Santé Canada qui porte sur les dépenses de santé selon l'âge et le sexe, de même que selon la catégorie de dépenses, le secteur de financement et la province ou le territoire. Il couvre les dépenses de santé échelonnées sur deux décennies.

Dans ce second rapport, les groupes d'âge sont divisés par tranches de dix ans. En outre, les estimations à l'égard des aînés sont maintenant réparties en trois sous-groupes : 65 à 74 ans; 75 à 84 ans; et 85 ans ou plus. L'analyse porte sur sept catégories de dépenses : hôpitaux; autres établissements; médecins; autres professionnels; médicaments; services de soins à domicile; autres dépenses.

Pour chaque secteur de financement ou catégorie de dépenses, le Guide méthodologique présente la définition du secteur de financement ou de la catégorie de dépenses; la source des données administratives utilisées pour répartir les dépenses de santé selon l'âge et le sexe; la description et la source des variables de substitution utilisées pour répartir les dépenses de santé selon l'âge et le sexe lorsque les données administratives n'étaient pas disponibles; la méthode d'extrapolation utilisée afin d'estimer les données pour les années où elles n'étaient pas disponibles; et un caveat si nécessaire.

Enfin, la section sur les notes techniques explique les concepts reliés à la présente étude, notamment les estimations et projections démographiques, les déflateurs, la méthode utilisée pour l'extrapolation et la méthode utilisée pour les projections à long terme. Cette dernière section explique aussi la façon dont on a procédé pour estimer les dépenses en soins à domicile.

Les estimations proviennent d'un nouveau modèle de dépenses de santé selon l'âge et le sexe. Ce modèle aidera les analystes et les chercheurs en politiques sur la santé à analyser les répercussions du vieillissement de notre population sur différentes catégories de dépenses de santé et il contribuera à une meilleure compréhension des générateurs de coûts et des pressions exercées sur notre système de soins de santé, qui est essentiellement financé par les fonds publics.

Les données initiales utilisées pour estimer les dépenses de santé par âge et par sexe ont été extraites de la Base de données sur les dépenses nationales en santé (BDDNS) de l'Institut canadien d'information sur la santé (ICIS). Toutefois, Santé Canada a présenté les données selon l'exercice pour faciliter l'analyse des dépenses de santé du point de vue des gouvernements provinciaux et territoriaux.

Une autre estimation a également été préparée par Santé Canada pour les dépenses de services de soins à domicile fournies par provincial and territorial governments, because CIHI estimates were not available for all the provinces and territories, and do not currently include homemaking services. Health Canada also made a separate, preliminary estimate for private sector home care service expenditures.

Caution should be exercised when comparing data between the provinces and territories, either from a per capita or a percentage distribution perspective. In most provinces and territories, the programs and services may cover a different population and provide different benefits. The amount of benefit may also vary according to clinical evaluation, assessment of needs and co-payment charges. Moreover, in many provinces and territories, coverage and terms for programs and services have changed over the years.

les gouvernements provinciaux et territoriaux, car l'ICIS ne disposait pas d'estimations pour toutes les provinces et tous les territoires et ne comprennent pas actuellement les services d'entretien. Santé Canada a aussi préparé une estimation distincte préliminaire pour les dépenses de services de soins à domicile du secteur privé.

Il faut faire attention lorsqu'on procède à la comparaison de données entre les provinces et les territoires, soit par habitant ou répartition en pourcentage. Dans la plupart des provinces et des territoires, les programmes et les services peuvent couvrir une population différente et offrir des services différents. Le montant des services peut également varié selon l'évaluation clinique, l'évaluation des besoins et la participation aux coûts. Par ailleurs, dans de nombreux territoires et provinces, la couverture et les modalités des programmes et des services ont changé au cours des années.

Liste des figures

In the following list, for some chart groupings, the main subject of the figures is first shown in bold print and is followed by the number and title of each corresponding chart.

- Percentage Distribution of Total Health Expenditures by Age Group, Canada, 2000-01
- Per Capita Total Health Expenditures by Age Group and Sex, Canada, 2000-01
- Percentage Distribution of Public Sector Health Expenditures by Age Group, Canada, 2000-01
- Percentage Distribution of Private Sector Health Expenditures by Age Group, Canada, 2000-01
- Per Capita Public Sector Health Expenditures by Age Group and Sex, Canada, 2000-01
- Per Capita Private Sector Health Expenditures by Age Group and Sex, Canada, 2000-01
- Per Capita Health Expenditures by Province and Sector of Finance - Seniors aged 65+, Canada, 2000-01
- Per Capita Total Health Expenditures by Selected Age Group, Canada, 1980-81 to 2000-01
- Per Capita Total Health Expenditures by Selected Age Group, Canada, 1980-81 to 2000-01
- 10 Per Capita Total Health Expenditures by Selected Age Group, Canada, 1980-81 to 2000-01
- 11 Percentage Distribution of Population by Age Group, Canada, 2000
- 12 Percentage Distribution of Population by Age Group and Sex, Canada, 2000
- 13 Percentage Distribution of Total Health Expenditures by Age Group and Sex, Canada, 2000-01

Dans la liste suivante, pour certains groupes de graphiques, le sujet principal des graphiques est d'abord mentionné en caractères gras et est suivi du numéro et du titre de chaque graphique correspondant.

- Répartition en pourcentage des dépenses totales de santé selon le groupe d'âge, Canada, 2000-2001
- Dépenses totales de santé par habitant selon le groupe d'âge et le sexe, Canada, 2000-2001
- Répartition en pourcentage des dépenses de santé du secteur public selon le groupe d'âge, Canada, 2000-2001
- Répartition en pourcentage des dépenses de santé du secteur privé selon le groupe d'âge, Canada, 2000-2001
- Dépenses de santé par habitant du secteur public selon le groupe d'âge et le sexe, Canada, 2000-2001
- Dépenses de santé par habitant du secteur privé selon le groupe d'âge et le sexe, Canada, 2000-2001
- Dépenses de santé par habitant par province et secteur de financement - Aînés de 65 ans ou plus, Canada, 2000-2001
- Dépenses totales de santé par habitant selon le groupe d'âge choisi, Canada, 1980-81 à 2000-01
- Dépenses totales de santé par habitant selon le groupe d'âge choisi, Canada, 1980-81 à 2000-01
- 10 Dépenses totales de santé par habitant selon le groupe d'âge choisi, Canada, 1980-81 à 2000-01
- 11 Répartition en pourcentage de la population selon le groupe d'âge, Canada, 2000
- 12 Répartition en pourcentage de la population selon le groupe d'âge et le sexe, Canada, 2000
- 13 Répartition en pourcentage des dépenses totales de santé selon le groupe d'âge et le sexe, Canada, 2000-2001

Tableaux statistiques

ost tables presented in the following pages appear as a set of four tables sharing the same title.

Tables ending in "A" generally refer to health expenditures in millions of dollars, expressed as "(\$'000,000)" for each age group and sex. Tables ending in "B" provide the percentage distribution of the series, while tables ending in "C" provide expenditures in dollars per capita. Tables ending in "D" provide the percentage change in per capita figures.

In order to better compare the provinces and territories, several tables ending in "D" also provide a percentage distribution calculated with the age standardization method using the population of males and females in Canada for the year 2000-01 as a reference.

Some figures in the tables and charts may not add up to the totals given due to rounding.

a plupart des tableaux présentés dans les pages qui suivent sont regroupés par série de quatre tableaux portant le même titre.

Les tableaux se terminant par la lettre «A» présentent habituellement les dépenses de santé en millions de dollars, exprimées en «(\$' 000 000)» pour chaque groupe d'âge et chaque sexe. Les tableaux se terminant par la lettre «B» présentent la répartition en pourcentage des dépenses, tandis que les tableaux se terminant par la lettre «C» présentent les dépenses de santé en dollars par habitant. Enfin, les tableaux se terminant par la lettre «D» donnent la variation en pourcentage des données par habitant.

Afin de mieux comparer les provinces et les territoires, dans plusieurs tableaux, les tableaux se terminant par la lettre «D» donnent également une répartition en pourcentage normalisée pour l'âge qui a été calculée au moyen de la méthode de normalisation pour l'âge, en fonction de la population d'hommes et de femmes au Canada en 2000-2001.

Le total de certaines données apparaissant dans les tableaux peut ne pas correspondre en raison de l'arrondissement des données.
